

## PDF Generation – Configuring your Learning Package to enable the learner to printout PDFs

### Introduction

This document explains how you can provide your students with the capability of printing or saving the content from your learning packages and also print or save certificates as you wish.

As an author you can decide whether learners can print or save:

- I) A completion Certificate
- II) The complete content of the package
- III) The answers the learner has given to questions and MCQs posed within the package

The latter function is useful if you wish learners to submit their free text answers for marking.

### Setting the PDF Options

The system is entirely flexible, the author controls which of the print options is available to the learner i.e. one, none or many. When an author is editing a package, they can set the PDF options by clicking on Package Settings tab. The following screen is displayed.

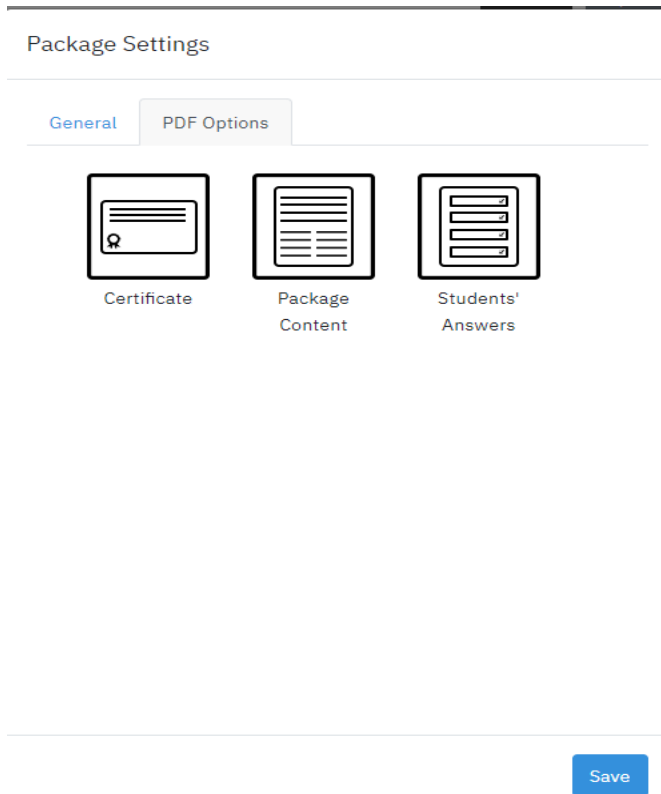

The screenshot shows the 'Package Settings' window with the 'PDF Options' tab selected. The interface includes a 'Save' and 'Export' button at the top right. Below the title bar, there are two tabs: 'General' and 'PDF Options'. The 'PDF Options' tab is active. The settings are as follows:

- Created By:** Joe Bloggs - 07/08/2020 - 15:20
- Updated At:** 07/08/2020 - 15:30
- Description:** A text input field with a cursor.
- Tags:** A text input field with a lock icon.
- Package Language:** A dropdown menu set to 'English'.
- Published Package URL:** A text input field containing the URL: `https://causewaydev.inishwork.space/package/S1d0GqjCyf0rdw4gjrG`
- Do you wish to collect student responses ?** An unchecked checkbox.

A 'Save' button is located at the bottom right of the form.

Click on the PDF Option tab.

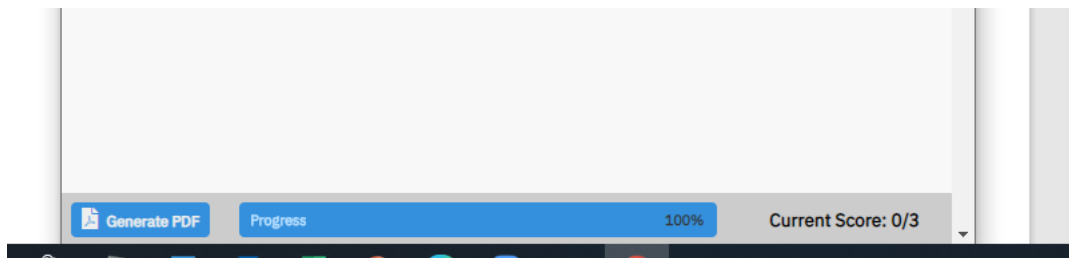

The above options are displayed

When the author clicks on one of the options a tick is displayed. This can be toggled on or off. When the save button is pressed the combination of options selected by the author is applied to the published learning package.

Note: When a Learner is using the package, the generated PDF button only appears when they have accessed 100% of the pages within the package.

### Learner view of PDF option

In the learner's view of the package the resulting bar appears across the bottom of their page.

When they click on the Generate PDF button the following panel appears

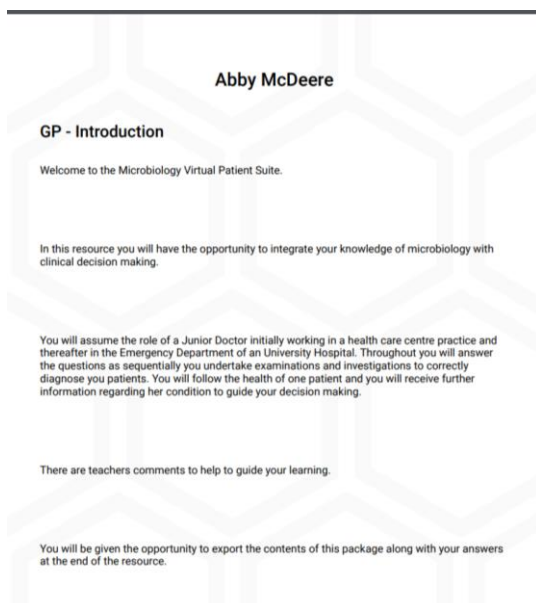

The options displayed having been dictated by the author.

The learner clicks on the option they want to save as a PDF. The generated file is stored on their own file system and can be printed or shared as desired. If they require more than one of the PDFs they have to click on the Generate PDF button to select another.

### 1. Certificate

### 2. Package Content
